

Aim: Prepare Timeline Charts to track progress for a case study to your assigned project .

Objective: To Create a Timeline Chart for a Hotel Management System

Timeline Chart: Timeline charts are highly versatile visual charts that are used to illustrate a set of events chronologically. They're an excellent tool for conceptualizing event sequences or processes to gain insights into the nuances of a project. That could include summarizing historical events, or any other time frame where you need to measure minutes, hours, dates, or years.

There are many potential use cases for timeline charts. For example, history students can use them to highlight important events to help remember dates for an exam. Organizations can use them to break down complex projects into more manageable stints. Researchers can also use them to keep track of the time between experiments.

Types of Timeline charts:

While all timeline charts contain the elements mentioned above, there are some notable differences among the types you can use. Here, you'll learn more about the variety of timeline charts you can choose from, what makes them unique, and projects that might be a good match for each:

Gantt chart

Gantt charts are grid-based diagrams that break down projects across calendar days. They are typically used as a project management tool for large-scale development projects with multiple stages and a firm deadline. For example, Gantt charts are used widely in the construction industry, where plans are highly dependent on each other, and one part of the project can't start until another has ended. They are also used in industries such as event planning to create a dependency between different tasks.

TIMELINE CHART:-

	JULY		AUG				SEP				OCT	
	W3	W4	W1	W2	W3	W4	W1	W2	W3	W4	W1	W2

Timeline Chart for Hotel Management System

Conclusion: Thus from the above experiment we have learned how to draw the Timeline Charts and they are a simple way of providing a clear overview of what needs to be done and when which can help you manage complex tasks and ensure they're completed on time.
