

Hotel Management system

Problem Statement :

The old manual system was suffering from a series of drawback. Since whole of the system was to be maintained with hands the process of keeping, maintaining and retrieving the information was very tedious and lengthy. The records were never used to be a systematic order there used to be lots of difficulties in associating any particular transaction with a particular context. If any information was to be found it was required to go through the different registers, documents there would never exit anything like report generation. There would always be unnecessary consumption of time while entering records and retrieving records. Once the records were entered it was very difficult to update these records.

Scope :

The HMS project is intended for the reservations for room that can be made through online. It will be able to automate the various operations of the Hotel. Our Hotel Management System will have three end users: Customer, Receptionist, and Hotel Manager. Hotel Management System will consists of Booking Management System, DBMS Server, and Report Generator. Customers will be able to check for room's availability, select the rooms, and pay for the room. Receptionist will have access to update or modify booking details. Manager will able to view the financial report and able to update room information such as cost and category. The main goal of this introduced automated HMS software is to simplify every day process of hotel. Day to day Hotels are increasing and they need to automate to provide customer ease of access. It will be able to take care of services to customer in a quick manner. This automation will be able to replace the drawbacks of large customer information physical files which were difficult to handle. Secure Transaction, quick retrieval of information, ease of use, quick recovery of errors, fault tolerance are some of the benefits that development team will be working on to achieve end user satisfaction.

Funtional Requirements :

FR1. The Customer should be able to register with their details

FR2. The system should record following customer details into member database.

Name

Email

Password

Address

DOB

FR3. The system shall send verification message to email

FR4. The system should verify the customer email & password against the member database

when logging in

FR5. After login, member should be directed to Home screen

FR6. The system should enable customer to check for availability of rooms

FR7. The system should display rate for all rooms

FR8. The system should allow customer to confirm or cancel the booking

FR9. The system should record booking details into database

FR10. The system should allow Receptionist to update, add or delete booking information

FR11. The system should provide customer desk portal access to receptionist for providing

response to customer inquiry

FR12. The system should generate financial and customer report for manager

FR13. The system should enable manager full modification access to customer ,booking and

room information

FR14. The system should allow customer to pay bill via online using credit or debit card

Non-functional Requirements :

- NF1. Data in database should be updated within 2 seconds.
- NF2. Query results must return results within 5 seconds
- NF3. Load time of UI Should not take more than 2 seconds
- NF4. Login Validation should be done within 3 seconds
- NF5. Response to customer inquiry must be done within 5 minutes.
- NF6. All external communications between the data's server and client must be encrypted
- NF7. All data must be stored, protected or protectively marked.
- NF8. Payment Process should use HTTP over Secure protocol to secure the payment transactions
- NF9. Database should be backed up every hour.
- NF10. Under failure, system should be able to come back at normal operation under an hour.
- NF11. Not more than 10,000 members to be registered
- NF12. System need to handle at least 20 transactions during peak hours.
- NF13. Report should be generated automatically every day for manager and anytime upon request.

Hardware Requirements :

Operating System : Supports all know operating system like windows.

Computer: 1GB+RAM, LCD with minimum resolution of 102x768, Keyboard and Mouse.

Software Requirements :

Web Server : Os Windows

Database server : MySql

Development end :

c#,html & css for front end

mysql server used for backend

DFD :

Level 0 DFD :-

Level 1 DFD :-

Level 2 DFD:
