

Vidyavardhini's College of Engineering & Department of Computer Engineerin

Experiment No. 6
Prepare WBS for a case study
Date of Performance: 14/08/23

Vidyavardhini's College of Engineering &

Department of Computer Engineerin

Aim: Prepare WBS for a case

Objective : To Design Work Break Down Structure for Hotel Management System

Theory:

Work Breakdown Structure:

A Work Breakdown Structure (WBS) is a hierarchical decomposition of a project into components or work packages. It is a visual and organized way to break down a project into smaller, more manageable tasks, making it easier to plan, manage, and track the progress.

Key points about a Work Breakdown Structure (WBS)

Hierarchy: A WBS is structured in a hierarchical manner, with the top level representing the entire project and progressively breaking down into smaller components. **Deliverables:** Each level of the hierarchy represents a deliverable or a task that contributes to the completion of the higher-level deliverable. **Decomposition:** The process of creating a WBS involves breaking down the project scope into smaller, more manageable tasks until you reach a level where tasks are well-defined and can be assigned to specific team members. **Visualization:** WBS is often represented as a tree diagram, with the top-level deliverable at the root and sub-levels branching out below it, providing a visual representation of the project structure. **Management:** WBS is a valuable tool in project management as it helps project managers to plan, estimate resources, assign responsibilities, and track progress. It also helps in scope control by ensuring that all project components are identified and included in the plan, helping to prevent scope creep.

Applicatio

A Work Breakdown Structure (WBS) is a versatile tool used in various industries and scenarios to help plan, manage, and execute projects effectively. Here are some common applications of WBS:

1. **Project Planning:** The primary use of a WBS is in project planning. It allows project teams to break down a complex project into smaller, more manageable tasks and sub-tasks, making it easier to create detailed project plans, schedules, and budgets.
2. **Scope Definition:** A WBS helps in defining and clarifying the scope of a project. By listing all project deliverables and work components, it ensures that all necessary tasks are identified and included in the project plan, which is crucial for preventing scope creep.
3. **Resource Allocation:** By breaking a project down into smaller tasks, a WBS enables project managers to allocate resources (human, financial, and equipment) more effectively. It helps in identifying the resources required for each task and ensuring they are available when needed.

- component, facilitating budget planning and monitoring throughout the project's life cycle.
5. **Project Communication:** WBS provides a visual representation of the project's structure, making it easier to communicate the project's scope and objectives to stakeholders, team members, and management.
 6. **Risk Management:** A WBS can help in identifying potential risks associated with specific components or tasks. This allows project managers to develop risk mitigation strategies and allocate resources accordingly.
 7. **Progress Tracking:** During project execution, the WBS serves as a reference point for tracking progress. By comparing completed tasks to the WBS, project managers can assess whether the project is on schedule and make necessary adjustments.
 8. **Quality Assurance:** Quality control activities can be linked to specific components of the WBS, ensuring that quality standards are met at each stage of the project.
 9. **Work Package Management:** Team members can use the WBS to focus on specific work packages, ensuring that they understand their responsibilities and can prioritize their tasks effectively.
 10. **Product Development:** WBS is not limited to traditional project management; it can also be used in product development processes to break down the development tasks and components into manageable units.
